To whom it may concern

Re E-profiling

I write to support Energy Skills Australia and their subsidiary Energy Space Online Resources with their e-profiling application. eProfiling is an industry developed, non-intrusive workplace monitoring tool for the energy and ancillary industries, established and endorsed by the Master Electricians Australia (MEA). eProfiling is designed to protect the integrity of the on-the job component of the National Training System.

Master Electricians Australia is excited to be supporting this application, and we look forward to supporting employers and employees better meet the demand for mobile recording of trade experience for electrical apprentices.

Master Electricians is the peak body for electrical contractors nationally, servicing members, customers and key stakeholders across Australia. We provide members and stakeholders with a leading business partner, knowledge source and advocate. We are passionate about ensuring the voice of the electrical industry is heard as we actively advocate to government on issues impacting the industry. Our role is to provide the practical information, training and advice to assist our members run their business. In areas that we don't deliver we partner with quality and reliable companies like Addstaff to deliver member needs.

Energy Skills Australia e-profiling has received praise and support from across the electrical industry as they create and deliver industry and trade specific tools to better record apprentice experience and skill. We look forward to them continuing to deliver their application and enhance these results.

Malcolm Richards
Chief Executive Officer
